

Feel Great & Live Long

Awesommm Serves Delicious Coffee and Underprivileged Communities

Awesommm is an all-new coffee brand that focuses on bringing the **highest quality 100% arabica beans** to consumers while giving back to the underserved communities around the world.

Awesommm coffee beans are grown in the Land of Thousand Hills in Rwanda on farms that have been active for over 100 years. The experts we work with in Rwanda have been producing rich and delicious coffee beans since the 1920s. Their farms are located at high altitudes with regular rainfall and nutrient-dense soil – it is the perfect environment for growing coffee beans that taste amazing and have health benefits in every cup.

100% Arabica Beans

We are proud to offer 100% arabica beans in light, medium, and dark roasts. Arabica coffee can be traced back to Ethiopia, the birthplace of coffee, and accounts for 60% of the coffee in the world.

The widely consumed plant spread throughout the world to areas where conditions were most suitable – mainly tropical regions with high elevations. However, there are certain areas that can produce healthy coffee plants, but not arabica. For example, Vietnam grows coffee, but they do not have the right conditions to produce the most popular type of coffee.

Arabica is a coveted coffee bean because it has a complex flavor profile and the right balance of sweetness and acidity. Furthermore, it is more difficult to grow arabica than other coffee, like robusta, so it is known as a premium commodity.

Benefits of Awesommm Coffee

Of course, coffee is well known for providing a boost of energy to wake you up in the morning and help you power through the day. However, coffee may have health benefits that give you more reasons to pour another cup.

Research shows that drinking a cup of coffee every day may lower your risk of developing type 2 diabetes. Coffee is rich in antioxidants, which can positively affect insulin sensitivity, inflammation, and metabolism – all of which contribute to developing type 2 diabetes.

Studies suggest that drinking coffee can be beneficial for brain health and can protect against neurodegenerative disorders, including dementia and Parkinson's disease.

Scientific reviews found that drinking 3-5 cups of coffee per day can lower the risk of heart disease by 15%, lower the risk of stroke by 21%, and decrease the risk of heart failure.

Aside from these health benefits, coffee is a versatile beverage that millions of people around the world enjoy. Here at Awesommm, we believe that joy is enough of a reason to do anything, and we should all do more of what makes us happy.

Dedicated to Our Communities

Awesommm pledges to donate 10% of our net income to support the welfare of underprivileged communities in any part of the world. When you purchase a bag of Awesommm coffee, you can feel awesome about the fact that you're contributing to a family in need.
